Vibration Mote Model 3

WIRELESS CONDITION MONITORING SENSOR
FOR FIXED & VARIABLE SPEED ROTATING EQUIPMENT

THREE SENSORS IN ONE

TEMPERATURE

TRI-AXIAL VIBRATION

MAGNETIC FIELD
The Vibration Mote, Model 3 (VM3) is a 3-in-1 wireless sensor that measures triaxial vibration, surface temperature and running speed, providing a holistic approach to condition monitoring of critical rotating equipment.

Simply insert a standard battery, connect to WiFi and start monitoring the health of your assets from anywhere.

The Petasense ARO Cloud uses machine learning algorithms, coupled with a comprehensive library of assets and failure modes, to continuously assess asset health. Web and Mobile Apps allow you to monitor your assets remotely and receive actionable insights through real-time notifications.

*Use of Vibration Motes requires an active subscription to the Petasense ARO Cloud.*
DETECT ISSUES EARLIER
High bandwidth, triaxial vibration sensor with 5,500 Hz frequency response in all 3 axes and up to 8000 lines of resolution, providing the perfect balance between battery life and resolution. Detect:

- Misalignment
- Imbalance
- Gearbox defects
- Looseness
- Cavitation
- Early stage bearing wear

MONITOR FIXED SPEED OR VARIABLE SPEED EQUIPMENT
Integrated magnetometer provides simultaneous measurements to collect running speed, vibration and temperature. This solves a challenging problem of trending readings for variable speed or intermittently operating assets.

COLLECT MEANINGFUL DATA
Advanced Machine Learning at the Edge is built into VM3, providing smart measurements such as:

- **Event-based measurements**
  Taken only when asset is on and/or operating at a specific running speed, enabling consistent trending

- **Coordinated measurements**
  All Motes on asset train to take synchronous measurement

5 YEAR BATTERY LIFE
Based on two measurements per day. Machine learning at the edge and sensor design optimizes battery life.

FLEXIBLE DEPLOYMENT
Data transmission over standard WiFi, with no additional hardware or proprietary network required. Instant measurements provide an option for plants without WiFi, by taking readings via iPhone or iPad. “Hot Mote” capabilities enable usage for troubleshooting and multi-phase measurements.

NEVER LOSE YOUR DATA
If the wireless network goes down, the Motes have onboard storage to prevent data loss. Data gets automatically transmitted once the connection is re-established.
ADVANCED PREDICTIVE ANALYTICS SOFTWARE

Petasense ARO: Asset Reliability & Optimization
brings together sensor data, asset knowledge, physics based modeling and machine learning analytics to get the most out of any industrial asset. Implement a wireless IoT based predictive maintenance program (PdM) for all critical equipment.

MACHINE LEARNING ANALYTICS
Advanced ML algorithms generate Asset Health Scores for each unique asset in real-time. By analyzing over 20 features within each sensor reading, the algorithm can detect anomalies weeks or months before a failure occurs and present a single indicator of asset health.

ADVANCED ANALYST TOOLS
ARO Cloud has an intuitive-user interface with all the features that an analyst will need to diagnose developing problems, without the complexity.

MONITOR ANY CRITICAL ASSET
The Vibration Mote can be used for any rotating asset in conjunction with the Petasense Transmitter to monitor any asset from a single software. Static equipment like steam traps, valves and electrical panels can be monitoring alongside rotating assets.

INTEGRATE 3RD PARTY SYSTEMS
Bring in data from a variety of sources to create a complete model of real-time asset conditions. RESTful APIs allow easy connection with historians, analytics, CMMS, SCADA systems and other software.
PROACTIVELY MONITOR YOUR ASSETS

MINING & METALS
- Evaporators
- Finishers
- Conveyors

CRITICAL FACILITIES
- Air handler units
- Exhaust fans
- Chillers

OIL & GAS
- Gas compressors
- Centrifugal pumps
- Gearboxes

POWER GENERATION
- Chill and boiler pumps
- Cooling towers
- Generator fans

PHARMACEUTICALS
- Homogenizers
- Agitators
- Mixers

“Petasense caught a significant issue with an air handling unit that saved valuable biological experiments for our client. Everyone benefits from the sheer value this technology brings.”

SENIOR DIRECTOR OF RELIABILITY

“The Motes alerted us about a major inefficiency in the operation of our pump system and we have taken corrective action. Looks like another win for Petasense!”

DIRECTOR OF OPS & MAINTENANCE
